

Access and Tour Console

Lab Details:

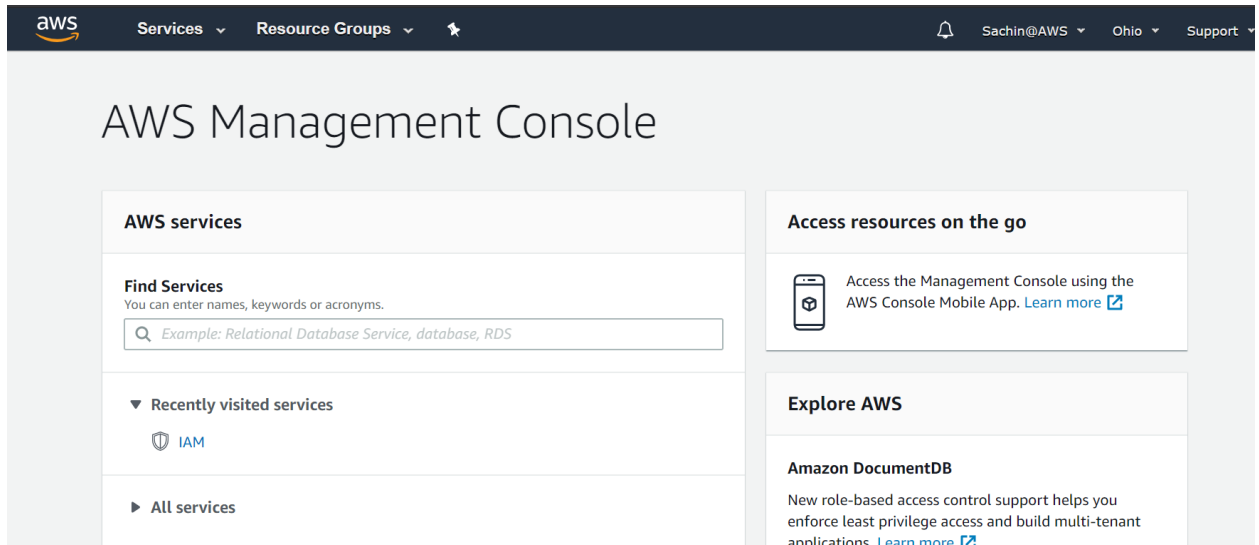

1. This AWS Lab is provided for practicing logging into AWS. Once logged in, students can navigate through the AWS console on their own to get themselves familiarized with the AWS console. By the end of the lab, you will understand how AWS console looks, know how to search for various AWS resources, and understand various AWS resource locations and how they are categorized.
2. Duration: **15 minutes**
3. AWS Region: **US East (N. Virginia)**

Tasks:

1. Log into AWS Management Console.
2. Since it is a tour, navigate around to see the AWS console.
3. Search for AWS resources.
4. Understand the Navigation inside AWS console properly.

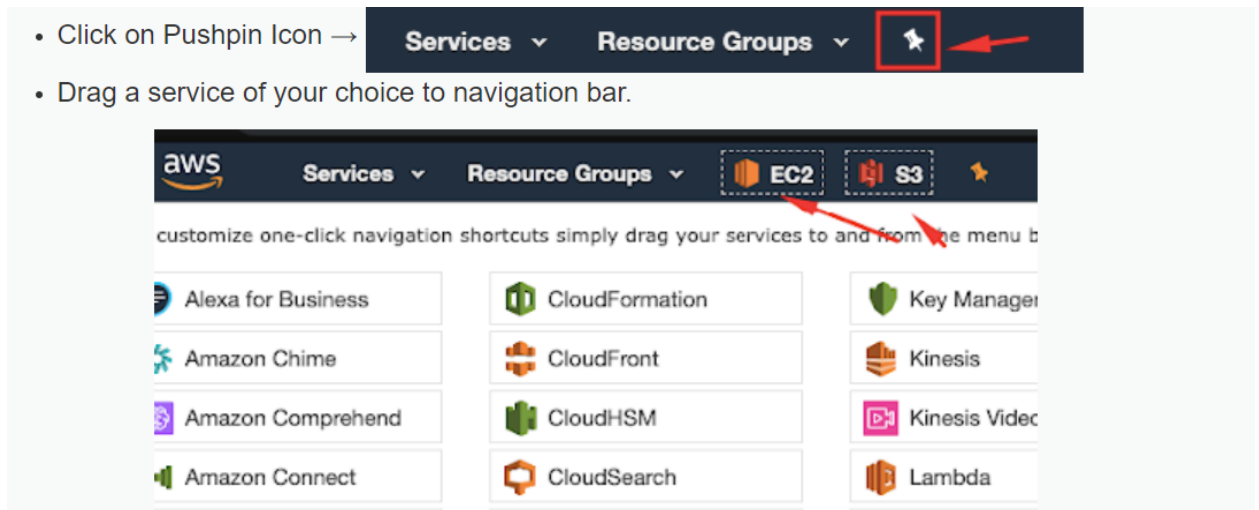

Tour AWS Console

1. AWS Management Console is a web application that consists and refers to a complete collection of service consoles for managing your applications. When you log in, you see the console home page.
2. Once logged into AWS Console, looking around to explore what the homepage has to offer.

3. Click on **Services**. Here you will find the list of AWS services available.

To add a shortcut:

Click on Pushpin Icon again. Now they will be available directly on the navigation bar for easy and direct access. Depending on the frequency of using services, you can keep your most-used resources in this spot for easy access.

4. To choose a region, click on **Ohio** on the top navigation bar and you can select any region of your choice.

Note: AWS resources created in one region will not be visible when you select another region in the AWS console. We will understand more about it in future labs.
